3500 SC Back

The 3000 series use the same pushbutton key pads as the 2000, but offers more model variants to suit a wider range of applications. They include; key override models (BL3600 and BL3700) enabling the code to be overridden by the key; rim fixing deadbolts (BL3500 and BL3600) for greater security, proving that Borg provides a model suitable for virtually every application.
